RANSOM-PROOF: CYBER RESILIENCY IN 2022

May 26, 2022
5:30 PM-9:00 PM

Eastern Time

The growth and evolution of ransomware is one of the most destructive trends of the last decade. This explosion has moved ransomware from an economic crime to one with immense global security implications. NATO, the U.S. federal government and military, and the G7 have all recently acknowledged the severity of the ransomware threat and the need for a large-scale coordinated response from government and industry.

Enterprises can't prevent a cyberattack, but they need to take the necessary steps to be prepared to effectively protect their data when an attack occurs.

Join this event to discuss with your peers the steps they have taken to protect their organizations from ransomware, how to build an enterprise framework for resilient recovery, timelines, steps, and lessons learned from actual ransomware recoveries, regulatory changes affecting ransomware readiness, and technical solutions that have prevented the need to pay a ransom
