CLOUD NATIVE ROADBLOCKS: WHY AREN'T YOU LEAVING LEGACY DATABASE SYSTEMS?

December 15, 2022
11:00 AM-12:15 PM
Central Time

Legacy database systems are a standard for enterprise IT infrastructure. But as industry leading businesses accelerate cloud native transformation, these legacy technologies can turn into costly and innovation-halting roadblocks that hinder the modernization of applications. Organizations are aware of the benefits for moving legacy, on-premises databases and applications into cloud native infrastructure and services, such as: • reduce Total Cost of Ownership (TCO), • eliminate expensive commercial software licenses, • improve database availability, scalability, security, and performance • position applications to leverage business-transforming AI, ML and analytics capabilities Despite an understanding of the benefits—the lack of a confident first-step and actionable transformation roadmap pushes leaders to begrudgingly accept the status quo rather than invest time and resources for modernizing databases and transforming applications.
