AGENDA

The 1st Cloud Runtime Security Summit

CADR:CON

SPEAKERS

Tom Croll
Advisor & Former Gartner Analyst
Lionfish Tech Advisors

Gokula Mishra
VP of Data Science
Direct Supply

Michael LaRue
Deputy Director of Software Delivery & Data
University of Illinois at Chicago

Vijay Jakka
Global Data Governance Leader
MetLife

Abhay Shah
Head of Technology, Infosec Risk & Compliance
DoorDash

Russ Felker
CTO
Trinity Logistics

Ebenezer Arumai
Director, IT Infrastructure & Security
Inogen

Steve Zalewski
Former CISO
Levi Strauss & Co.

Sabrykrishnan Loganathan
Director of Digital & Gen-AI Strategy
Regal Rexnord

VISION VOICES

Bridging the Gap: From CNAPP to CADR – Securing Cloud-Native Applications End-to-End

In today's dynamic cloud landscape, organizations face an ever-expanding array of security challenges that span from development environments to full-scale cloud deployments. This session will explore the evolution of cloud security by examining how traditional Cloud-Native Application Protection Platforms (CNAPP) are being enhanced with advanced Cloud Application Detection and Response (CADR) capabilities. Attendees will gain insights into how these integrated frameworks provide comprehensive, end-to-end protection—bridging the gap between proactive risk management and real-time threat mitigation.

PANELISTS

Tom Croll
Advisor & Former Gartner Analyst
Lionfish Tech Advisors

KEYNOTE

A New Era in Cloud Runtime Security: Cloud Application Detection & Response

Detecting and responding to cloud attacks has never been more challenging. Modern attacks and the ever-changing nature of cloud infrastructure and applications make security teams' lives more difficult than ever. A new approach is needed - one that can provide a fully traceable & explainable runtime security story spanning the entire cloud technologies stack.

Networking Break

PANEL

The Modern CISO Strategy and Priorities: Protecting Cloud Infrastructures and Applications Against Modern Attacks

In recent years, we have added more and more tools to protect our cloud infrastructures and applications , but are we really more secure?
Traditionally, we started with the cloud security posture, but was that the right move?

The cloud security market has grown and changed significantly - from CSPM, to ASPM and CNAPP. It seems that every few months a new category is popping up. But what is still missing? Where should we focus next? posture or runtime? shift left or protect right?

CHAIR

Steve Zalewski
Former CISO
Levi Strauss & Co.

PANELISTS

Tom Croll
Advisor & Former
Gartner Analyst
Lionfish Tech
Advisors

Abhay Shah
Head of Technology,
Infosec Risk &
Compliance
