ENHANCING YOUR EDGE

March 08, 2022
3:00 PM-4:15 PM

Eastern Time

Edge computing is computing topology in which the content collection and delivery are placed closer to their endpoints. The goal of edge computing is to keep the traffic and processing local to eliminate delays. Currently, edge computing is being driven by IoT and requires processing to be close to the end rather than on a centralized cloud server. However, rather than creating brand new architecture, cloud computing and edge computing will evolve into centralized servers, on-premises servers and on the edge devices themselves.

CHAIR

Ibrahim Jackson
Founder
Ubiquitous Preferred Services

PANELISTS

Arkady Polyak
Chief Technology Architect, Digital Business & Technology
Cognizant

Dara Meath
Chief Information Officer
Conair LLC

Jince Lukose
CTO
Applegate & Thorne-Thomsen
