Healthcare leadership needs to exhibit adaptability and resilience, especially during times of disruption. Being forced to make extremely fast decisions with high levels of uncertainty requires the latest knowledge within the industry's latest technologies.

The C-Vision program team carefully researches the issues facing healthcare leadership with our panels of industry advisors and brings to you impactful programs that provide real world strategies and solutions that can have meaningful impact in the short and long term.

9:00 AM-9:30 AM

Impacts of Virtual Health on Patient Centric Care

Telemedicine is rapidly evolving. Issues with regulation and reimbursement have prevented its full immersion into the healthcare system. During the current pandemic, the Centers for Medicare and Medicaid Services expanded access to telemedicine services. The advantages of telemedicine suggest its cost-effectiveness, ability to extend access to specialty services, and its potential to help mitigate the looming physician shortage. Disadvantages seemingly include lack of available technological resources in certain parts of the country, issues with security of patient data, and challenges in performing the traditional patient examination. Let's explore.

VISION KEYNOTE PANEL

9:35 AM-10:30 AM

Shaping a Virtual Health Strategy

Virtual Health offers an opportunity for healthcare providers to improve the value for their patients, communities, and regions. As providers continue to innovate how care is provided they are seeing the measurable impact virtual health can make by leveraging technology to connect with patients in new ways. Let's consider key drivers, scope of services, and methods of delivery.

PANELISTS

FIRESIDE CHAT

10:35 AM-11:30 AM

Patient Centric Care and the Future of Pharmacy

Healthcare is creating more opportunities for patients to receive remote treatment options whether from their home or from long-term care or senior living residence. An increasingly important component of treatment planning is prescription services. How do the internal or external services provided by the pharmacy mirror the patient-centric care models the healthcare provider has developed? A patient's experience with the pharmacy of the future will be a true omnichannel experience. In fact, their experience won't start with walking in the door, it may start on their couch when they use a mobile device to contact their pharmacy.

VISION VOICES

11:35 AM-12:05 PM

Improving Quality of Care and Creating Financial Efficiencies

With new technologies boosted by electronic medical records and patient data management systems, data science, and analytic tools, massive amounts of data can be screened in seconds. Thus providing insightful information. How can we more effectively use the information in virtual health to make decisions and manage resources including the optimization of workflow, reducing unnecessary variation, and more effectively, managing workflow?

12:10 PM-12:40 PM

Virtual Health 2021 Debunking The Myths

Prior to the Covid-19 pandemic, policymakers and leaders from both the health care delivery side and also the payer side were busy "reimagining" health care; but change was slow to occur because the economic incentives were not aligned with the vision. Covid-19 changed everything. Suddenly it's time to maneuver past reimagining and begin recreating. Let's consider the perceived impediments that led to the slow adoption of telemedicine, the changes that came with the Covid-19 pandemic, and advice on how to most easily implement a telemedicine program rapidly.

VISION KEYNOTE PANEL

12:45 PM-1:40 PM

What are the Keys to Effective Use of People, Processes & Technologies?

Innovation is the result of successful people, processes, and technology changes that enable a new level of productivity and performance. What are the disruptors that have impacted virtual health, and how healthcare organizations across the continuum achieve the right combination of people, processes, and technology?
