Whitehouse Cybersecurity Strategy - Software Liability and a Path Forward

CISOs are facing an increasingly complex, dangerous, and difficult digital landscape. Software supply chain attacks have increased an [average 742% each year](#) since 2019. The average cost of a data breach is an astounding \$4.35 million—not to mention the potential shareholder lawsuits, loss of customers, and damage to brand reputation. And earlier this month, The White House released a new cybersecurity strategy that calls for greater cybersecurity liability and holding software providers responsible for insecure products released to consumers. Meaning, it's now an organizational imperative at the highest level to get serious about securing your software supply chain.

Digital Transformation

CIOs play a crucial role in driving their organization's digital transformation efforts. The COVID-19 pandemic has accelerated the adoption of digital technologies, and CIOs must continue to lead the way to stay competitive and meet the evolving needs of customers and employees. This requires a deep understanding of the organization's goals, processes, and IT infrastructure, as well as collaboration with other business leaders. By successfully leading digital transformation, CIOs can position their company for long-term success in a digital world.
