Making the Impossible Possible: The Trick to Increasing Speed to Market While Reducing Risk

When it comes to deploying software, you want to crank releases out as fast as possible, but you also want to ensure that your software is secure. The perfect combination of speed to market and an acceptable amount of risk can feel like an illusion, a well-executed magic trick.

What if we told you that the illusion is within reach? With the right application security (AppSec) program, the seemingly impossible is possible. Join us as we discuss this common conundrum and offer tips on:

- Integrating security tools into your CI/CD pipeline
- Automating processes whenever possible
- Training your developers in secure coding best practices

And, if you're lucky, we might have a few additional tricks up our sleeves.
