Learn How to Build a SOC that Secures Your Organization

The world is evolving. So should your security operations center (SOC). To keep pace with a threat environment that is constantly changing, organizations need a SOC that empowers teams to identify and remediate exposures in near-real time. oin us for a one-hour virtual tour and find out how our security operations team embraces an integrated, AI-powered, and automation-first SOC that helps them achieve ten-second detection and one-minute response rates. In this session, you'll learn: — How you can utilize next-generation automation, threat intel and detection solutions to secure a sprawling attack surface. — Best practices for designing and adapting a SOC that meets the shifting demands of a cloud-native world. — How you can optimize SOC operations and increase staff productivity with prevention-focused technology and machine learning.
