**June 21, 2022**

5:30 PM-8:30 PM  
Eastern Time

## Cloud Security

According to Gartner 79% of companies have experienced at least one cloud data breach during the pandemic. Remote work is here to stay, and the concept of securing a perimeter has essentially ended. Traditional application security measures are broken. The need to innovate faster and shift to cloud-native application architectures isn't just driving complexity, it's creating significant vulnerability blind spots also. Under the thumb of the pandemic, enterprises and IT leaders had to look for tech solutions that were resilient and agile to empower the remote workforce. To sustain business continuity plans, organizations shifted workloads to the cloud. As much as cloud adoption offers flexibility and productivity, it also exposes organizations to cyber threats and data breaches. So the question remains if moving to the cloud is the right thing

to do and if so how to protect it from the new risks given that most organizations believe that application security should be completely automated to keep pace with dynamic clouds and rapid software development practices.

PANELISTS

Speaker

**Rafi Buchnick**  
**US Head of**  
**Technology & Cyber**  
**Risk**  
RBC - Royal Bank of  
Canada

Speaker

**Richard Van Horn**  
**VP, Global Technology**  
**Services**  
Geode Capital  
Management

Speaker

**Todd Gordon**  
**Security Director**  
Eisner Advisory Group

Speaker

**Peter Chestna**  
**CISO, North America**
