The Evolution of SaaS Management: Establishing Complete Control

In 2024, SaaS Management is evolving to control app spending, ensure compliance, and tackle shadow IT. Integrating IT policies with unified SaaS administration is crucial. Organizations need complete visibility into all apps and users to eliminate shadow IT. Granular access control across federated, non-federated, and shadow apps is essential. Continuous cost optimization requires enforcing centralized spend policies. Automation tools help stay compliant and audit-ready by streamlining access reviews and ensuring alignment with standards.
What challenges do organizations today face in eliminating Shadow IT? How can they enable granular & secure access control across

federated, non-federated, and shadow apps?
How can companies enable continuous cost optimization by enforcing centralized spend policies?
What tools and strategies are leaders currently exploring and implementing to stay compliant and audit-ready?
