## **Zero Trust With Zero Exceptions: Protect Your Piece Of The Cloud**

In a world of economic uncertainty and sophisticated threats, businesses need to securely develop cloud applications to safeguard against exploits, malware and ransomware while delivering a positive economic impact. Protecting your core business and cloud-native applications requires security that is simple and comprehensive. This is where a strategic Zero Trust architecture helps! In this session, you'll learn how Zero Trust principles deliver on the promise to secure your cloud applications that are the lifeblood of your business.
