## Exploring the Need for Cloud Email Security

Organisations worldwide have moved to cloud email and realized the benefits of increased productivity, collaboration, and extensibility. But attackers are abusing the open, connected nature of the cloud to carry out new cyber attacks—using social engineering tactics to trick users into inputting credentials, sending money, and providing access to confidential information. Making matters worse, attackers are also finding new ways to directly access the email environment, using third-party integrations and MFA bypass techniques to complete their scams. Join this session which will discuss why email is still the most important channel to protect, what types of attacks you can expect in the coming year, and how cloud email security platforms can keep your organization safe.

### PANELISTS

Chair  
VJ Viswanathan  
CEO  
Torque

Speaker  
Sadiq Sani  
Adviser and Senior  
Lecturer in  
Cybersecurity  
Greenwich University

Speaker  
Ryan Schwartz  
Sr. Product Marketing  
Manager  
Abnormal Security

Speaker  
Bogdan Grigorescu  
Senior Technical Lead,  
Automation  
Direct Line Group

Speaker  
Kris Blamires  
Digital Criminal Justice  
Lead  
Metropolitan Police
