Rethinking Search: How Technology Leaders Are Driving Intelligent Discovery

Join a small group of technology decision makers for a roundtable discussion on how organizations are applying techniques like semantic, vector, and hybrid search to improve how people find and use information.

This is a chance to ask questions, share what you're seeing in your own organization, and hear how others are thinking about Generative AI, search relevance, platform scalability, and what it takes to move from legacy systems to more intelligent search.
