12:15 PM-12:20 PM

PANEL

12:20 PM-1:05 PM

Bridging the Gap Between IT and the Business

Bridging the gap between business and technology is not easy and requires discipline and balance between technology, people, and the business. For so many organizations today, technology is the business. Technology needs to be understood as a critical enabler in every part of the organization from the front line to the back office. It creates new value by crunching data to deliver new insights, it spurs innovation, and it disrupts traditional business models.

For business and technology leaders alike, new actions and behavioral changes can help their organizations make this shift. CIOs must take responsibility for problems, they should convey that when technology fails, many people typically share responsibility.

Secure the Supply Chain: Effective Third-Party Risk Management for the Modern Enterprise

In today's interconnected world, securing the supply chain has become a critical priority for modern enterprises. Companies are progressing towards an end state where nearly 100% of their tech stack is owned by third-party vendors. Therefore, it is essential to implement effective third-party risk management strategies to protect sensitive data, maintain operational integrity, and ensure business acceleration and security culture. Ineffective third-party cyber risk programs can actually pose a risk to your business, hindering innovation and increasing vulnerabilities. However, by rethinking your third-party risk program and approach, proven strategies can be employed to mitigate risks without stifling innovation. These strategies aim to reduce the overall risk posture to your business while maintaining a strong security foundation and fostering a culture of innovation. By conducting thorough due diligence, assessing security controls, and establishing clear contractual agreements, organizations can secure their supply chain, maintain stakeholder trust, and drive business success.

Cloud Computing

Cloud computing is a rapidly growing area that CIOs must keep in mind. CIOs must evaluate the risks and benefits of cloud computing as its adoption continues to grow. While cloud solutions offer benefits like cost savings and flexibility, they also pose data security risks. CIOs must assess their organization's needs and integrate cloud solutions effectively. By managing these risks and benefits, CIOs can fully leverage cloud technology for their organization's success.
