Do you have fluid access to data honed for a specific business context or problem to leverage Generative AI?

Can you relate to the struggles that come with a digital transformation journey? Understanding “what great looks like,” or data privacy, security, compliance, or creating a data-driven culture just to name a few. Do your business and IT teams struggle to align on a data strategy?

Are you ready to drive business outcomes using data?

AWS and BJSS can help you get a head start and create new outcomes through digital transformation using database, analytics, AI and ML.

Build Business Value at Scale with Generative AI

12:00 PM-2:00 PM

In a fast changing world where Generative AI holds immense potential and requires careful safeguarding, it is more important than ever for organizations to stay focused on solving business priorities. Organizations need a modern data strategy and an AI strategy in order to innovate rapidly with generative AI at scale. This topic provides an overview of addressable use cases for generative AI; the approach to mobilizing and scaling business value; how to think holistically about data and AI; and considerations for technology, people, process, and mindset.

Discussion Topics

Data is an asset - leverage its power to drive business value for Generative AI

Technology: Modern Data Foundation. Incrementally scale data, platform, and people according to use case priority

Mindset: Foster innovation, agility, and reduce the cost of experimentation

People: New skills and roles; close the skill gaps

Process: Governance, Ethics and Alignment

Closing Remarks & Networking

2:00 PM-2:30 PM
